*** Notes of Significance *** Fires highlighted in yellow have submitted a final ICS-209																	

Evening Brief

Date Stamp: Saturday July 2, 2017

Weather Summary

...HIGH RISK for Isolated to Scattered Dry Thunderstorms possible Southern and Eastern UT today...
... HIGH RISK for Gusty Winds and Low RH for SW UT and AZ Strip today....
...HIGH RISK for Scattered to Increasingly Widespread Monsoonal Thunderstorms Wed-Fri...

A weak shortwave trough quickly tracks across the eastern Great Basin today. Isolated to Scattered high based thunderstorms are possible **over the higher elevations of central and eastern Utah**. Storms will likely be short lived and not produce much of any precipitation today, with better chances of outflow winds, even out of weak storms that do not produce lightning due to the very dry lower levels.

SW Winds today will increase ahead of this trough across the AZ Strip into SW UT today, with gusts 25-35 mph and single digit RH.

Generally sunny skies and hot temperatures return for the first part of the holiday week as the high pressure ridge builds over the four corners area. There may be enough remaining moisture Monday for a few thunderstorms over the Sierra Front, but coverage should be very isolated.

The first push of monsoon moisture will begin to move north into the Great Basin on Wednesday and increase through the remainder of the week into the following week. We have issued **High Risk** for mid to late week...but timing and locations may change due to this event still being several days out. Stay tuned for further updates.

Preparedness Levels

Current:

Great Basin	3
National	3

Great Basin Fire Activity: Moderate Activity

New Fires and Acres: 25 fires for 420 acres. 5076 acres large fire growth.

Resources:

- Crews: 21 T1 IHCs in GB, 15 committed, 4 Available and 2 R&R.
- T1 IMT Team 2 - Martin and T2 IMT Team 4 – Roide – Committed to Brianhead fire.
- Local IA resources are at drawdown for UT and NV.
- GBCC has committed an estimated 61 type 3, 4, 6 engines.
- 1-T1 and 4-T2 helicopter are available in GACC.

Great Basin Fire Potential Summary

Fine fuels, which have been the main contributor to fire spread early this season in the north, continue to dry out quickly across the Great Basin especially in areas that have remained very dry in the west/south. Higher than normal fine fuel loading and continuity exists over the northern half of the Great Basin. ERCs have now climbed to the 90th-97th percentile over southern NV/UT and the AZ Strip and are **near record highs in some areas**, with more advanced fire behavior on ongoing fires in southern Utah.

Further north ERCs also continue to increase and dry out...mostly in the 60th to 70th percentile with a few drier pockets. Sagebrush live fuel moisture is still near to above normal across the northern and western portions of the Great Basin, but is on the downward trend. Sagebrush live fuel moisture across Utah has dropped below normal and in some areas is approaching record lows.
